Project Title: Rubik's Cube Website

I would like to build this site as a multiple-page website, which is related to the Rubik's Cube. I am planning to break it into separate pages to make it more organized and include navigation on the top so that users can easily navigate through each section.

- **Home/Introduction** – Introduce a general overview of the Rubik's Cube, including what it is, its popularity, its status as an iconic puzzle, and how widely the cube is recognized worldwide.
- **History** - Describes the invention of the cube, the method originally called the "Magic Cube," and the rise in popularity of the cube in the 1980s.
- **Mechanics and Design** – Explains how cubes work internally and describes Rubik's cubes of different sizes and types, including variations like 2x2x2 and 4x4x4 cubes.
- **Solving Algorithms** – Introduce some basic solutions and links them to the more advanced methods used by speedcubers. It may refer to common algorithms for beginners.
- **Competitions** – Focus on the competitive aspects of cubing, including the World Cube Association, records, and notable speedcubers.
- **Sources** - Contains sources I used for the website, including the Wikipedia page, other media, videos, or images.
